

Binary 1702 LLC: Blueprint

PART 1. FOUNDATION OF THE BUSINESS

Tony Belleza

Consulting

Binary 1702 LLC

Founder: Ben Basuni

Address: 8524 Cloudcroft Way, Orangevale, California, 95662, United States

Phone: +1 916-595-7155

Email: ben@binary1702.com

1. Business Identity

Binary 1702 LLC is a technology company focused on software development, business automation, and digital systems implementation.

The company is designed to help businesses improve operations, capture leads, increase efficiency, and scale through structured technology solutions.

Binary 1702 LLC should not be positioned as a freelance service. It must be positioned as a **structured company that delivers systems, not isolated technical tasks.**

2. Strategic Positioning

Binary 1702 LLC operates as a **technology solutions partner** for businesses. The company delivers:

Custom Software

Custom software solutions and scalable digital infrastructure

Automation

Business automation systems and AI-driven workflows

CRM

CRM implementation, optimization, and lead management systems

Integrations

API integrations and follow-up systems

Brand Positioning Statement: Binary 1702 LLC helps businesses grow through custom software, automation systems, and scalable digital solutions designed to improve efficiency, lead management, and long-term operational performance.

Alternative version: We build software, automation, and business systems that help companies operate smarter, capture more opportunities, and grow with confidence.

4. Mission

To help businesses operate more efficiently and grow consistently through practical software solutions, automation, and intelligent systems.

5. Vision

To become a trusted technology partner for businesses seeking custom software, smarter operations, and scalable automation solutions in California and beyond.

Core Values & Business Philosophy

	Clarity Every project must have a clearly defined scope, expectations, and responsibilities.
	Efficiency Solutions must be practical, functional, and implemented with speed and purpose.
	Scalability Systems are built to support growth, not just solve temporary problems.
	Professionalism Every interaction reflects a structured company, not a freelance or improvised service.
	Accountability Each party is responsible for its own obligations, approvals, and operational costs.
	Practical Innovation Technology must solve real business problems without unnecessary complexity.

7. Business Philosophy

Binary 1702 LLC does not sell coding hours. The company sells **structured solutions, expertise, and business transformation through technology**.

8. What Binary 1702 LLC Is *Not*

- A low-cost freelance coding service
- An on-demand "fix anything" vendor without scope
- A company that absorbs client platform costs
- A business that starts projects without defined agreements
- A provider responsible for third-party subscriptions unless explicitly agreed

9. What Binary 1702 LLC *Is*

- A structured technology service company
- A strategic implementation partner
- A provider of software and automation solutions
- A business built on both recurring revenue and project-based work
- A company that operates through processes, documentation, and defined agreements

10. Founder Role Definition

Current Risk — Without Structure, the Founder Operates As:

- A programmer
- A task executor
- A reactive problem-solver
- A technician without business control

Defined Role Moving Forward

Founder & Technology Solutions Strategist

Alternative: **Founder & Software Solutions Consultant**

The founder must move from *reacting to client requests* to: diagnosing problems, structuring solutions, defining pricing, controlling scope, and leading delivery.

He is not only building systems. **He is leading a technology business.**

11. Business Model Direction — Two Core Revenue Pillars

Pillar 1: Recurring Revenue (Stability) • CRM systems • GoHighLevel implementation • Automation management • AI workflows • Ongoing system support	Pillar 2: Project-Based Revenue (Growth) • Custom software • Internal tools • API integrations • Dashboards • Advanced automation systems
---	--

 **Strategic Principle:** Large projects create growth. Recurring services create stability.

13. Financial Direction — Structured Growth Stages

\$7K Stage 1 Per month	\$10K Stage 2 Per month	\$12K+ Stage 3 Per month
-------------------------------------	--------------------------------------	---------------------------------------

14. Immediate Structural Priorities

Before scaling, Binary 1702 LLC must define:

01 Core services	02 Pricing structure
03 Proposal model	04 Contract and NDA system
05 Client responsibility policy	06 Ownership and licensing terms
07 Onboarding process	08 Recurring offer structure
09 Sales presentation format	10 Delivery boundaries

 **Key Operational Rule:** No project begins without a defined scope, payment agreement, and documented responsibilities.

Company Description: Binary 1702 LLC is a California-based technology company specializing in software development, business automation, and scalable digital systems. The company helps businesses improve lead management, operational efficiency, and growth through custom solutions, CRM implementation, automations, and strategic technology support.

 **Strategic Note:** The first transformation required is not technical. It is structural. The founder already knows how to build. Now the business must learn how to: position, price, sell, protect, and scale what is being built.

Service Structure & Offer Design

PART 2 — SERVICE ARCHITECTURE OVERVIEW

Binary 1702 LLC operates under a **dual-service model**, designed to balance predictable revenue with high-value project opportunities.

1. Recurring Services (Stability Engine)

- CRM implementation
- GoHighLevel setup and management
- Lead automation systems
- AI automations
- Ongoing support and optimization

2. Project-Based Services (Growth Engine)

- Website development
- Funnel and landing page design
- Custom forms and data systems
- Custom software development
- API integrations
- Internal tools and dashboards

A. RECURRING SERVICES — 2.1 Service Description

Binary 1702 LLC provides practical, scalable, and customized technology solutions designed to improve operations, lead generation, customer management, and overall business performance. Services include: CRM setup and implementation (GoHighLevel), website and landing page creation, funnel development and optimization, custom forms and lead capture systems, AI automations (chat, workflows, triggers), email and SMS automation systems, lead management and pipeline structuring, API integrations, basic internal tools for operations, and system design and user experience structure.

The objective is not only to build digital assets, but to create structured systems that help businesses:

Capture More Leads

Structured lead capture systems that never miss an opportunity

Respond Faster

Automated follow-up that responds instantly to every inquiry

Improve Conversion Rates

Optimized funnels and pipelines that turn leads into clients

Scale with Consistency

Systems built to operate more efficiently and grow predictably

2.2 Core Deliverables

Each client engagement may include: CRM system setup (GoHighLevel), pipeline creation and customization, automated follow-up sequences (SMS and email), website or landing page development, funnel structure (lead capture → nurture → conversion), custom forms and data collection systems, AI automation workflows (lead response, qualification, follow-up), calendar and booking integrations, API integrations (basic level), basic reporting dashboards, and system testing and deployment.

2.3 Service Packages (Recommended Structure)

Basic Plan - CRM setup 1 pipeline - Basic automation (SMS/email) 1 landing page or form - Light support  Setup: \$500 – \$1,000 Monthly: \$297	Growth Plan - CRM + multiple pipelines - Advanced automations - Funnel or landing page setup - Forms + lead capture optimization - AI automation basics - Monthly optimization  Setup: \$1,000 – \$2,000 Monthly: \$497
--	--

2.4 Client Responsibility Policy (CRITICAL)

Binary 1702 LLC does **not** absorb third-party costs.

The client is responsible for:

- GoHighLevel subscription
- SMS usage (Twilio or similar)
- Email sending platforms
- Domains and hosting
- AI tools and API usage
- Any third-party software or integrations

Binary 1702 LLC charges for:

- Setup
- Configuration
- Strategy
- System design
- Automation development
- Ongoing support and optimization

2.5 Support Scope Definition

Each monthly plan must clearly define: response time, number of updates or adjustments included, what is considered "support," and what qualifies as a "new project."

☐ **2.6 Boundary Rule:** Any request outside the agreed scope must be quoted and approved separately before execution.

B. PROJECT-BASED SERVICES — 3.1 Service Description

Binary 1702 LLC develops custom software and advanced systems designed to solve specific business challenges. Services include: custom software development, internal business systems, automation platforms, dashboards and reporting systems, API integrations, advanced workflows, and custom tools tailored to business operations.

3.2 Pricing Model (MANDATORY STRUCTURE)

Binary 1702 LLC must avoid hourly pricing.

Fixed Project Pricing Based on scope and complexity  Range (California market): \$3,000 – \$25,000+	Retainer Model Monthly development and support  Range: \$1,000 – \$5,000/month	Milestone-Based Payments 50% upfront → 25% mid-project → 25% upon completion
--	---	--

3.3 Cost Responsibility Policy

The client is responsible for:

- API costs (OpenAI, Twilio, Stripe, etc.)
- Hosting (AWS, Vercel, etc.)
- Third-party tools and licenses
- Infrastructure and system usage

Binary 1702 LLC is responsible for:

- Development
- Implementation
- Technical execution

3.4 Ownership & Licensing Strategy

Must be defined in every project.

Option A — Client Ownership

Client owns the final product. Binary retains reusable components.

Option B — Licensing Model

Client pays for usage. Binary retains system ownership.

3.5 Maintenance & Recurring Opportunity

Every project should lead to: maintenance plan, system updates, and technical support.

 Suggested: **\$200 – \$1,000+/month**

☐ **3.6 Change Management Rule:** Any feature not included in the original scope must be documented and quoted before execution.

3.7 Scope Definition Requirement

Every project must include: scope of work, timeline, deliverables, limitations, dependencies, and client responsibilities.

4. OFFER STRUCTURE (HOW SERVICES ARE PRESENTED)

4.1 Standard Offer Framework

Every proposal must include:

01	02
Problem	Solution
03	04
Deliverables	Timeline
05	06
Investment	Responsibilities

4.2 Positioning Rule

Never say: "I can build that"

Always position as: **"We implement systems that solve this and support your growth."**

4.3 Strategic Upsell Logic

Every client should be evaluated for: recurring services, future software needs, and maintenance opportunities.

☐ **4.4 Packaging Strategy:** Binary 1702 LLC does not sell tasks. Binary 1702 LLC sells structured solutions.

5. REVENUE STRATEGY — 5.1 Target: \$7,000/month

Example: 15 clients × \$297 = \$4,455 | 5 clients × \$497 = \$2,485 | Total: \$6,940 | + 1 project = \$2,000+

5.2 Growth Path

- Increase pricing
- Add higher-tier clients
- Expand retainers
- Reduce dependency on new leads

☐ **6. CORE BUSINESS RULE:** Recurring services sustain the business. Projects accelerate growth.

7. STRATEGIC WARNING

Without Recurring Revenue:

- Income becomes unstable
- Stress increases
- Growth becomes unpredictable

With Recurring Revenue:

- Stability increases
- Predictability increases
- Scalability improves

8. FINAL STRUCTURAL PRINCIPLE: Binary 1702 LLC is not a coding service. It is a structured technology company with defined services, pricing, processes, and responsibilities.

Pricing Strategy & Commercial Model

PART 3 — PRICING STRATEGY & COMMERCIAL MODEL

1. The Core Pricing Problem

The main issue is not technical skill. The issue is **pricing behavior and positioning**.

Current Risk — Ben is operating like:

- A technician selling time
- Someone reacting to client budgets
- Someone negotiating from insecurity
- Someone adjusting price to "close the deal"

Required Shift

Binary 1702 LLC must price based on **value, structure, and outcomes — not time**.

2. Pricing Philosophy

The client is not paying for hours. The client is paying for a **solution, speed, expertise, and business impact**.

3. The 3 Pricing Models (When to Use Each)

3.1 Fixed Project Pricing (Primary Model)

When to use: Clearly defined scope, specific deliverables, start and end date.

How to calculate: Instead of "how long will this take?" use: Complexity level, Business impact, Speed of delivery, Risk involved.

Example: A system that captures leads, automates follow-up, and increases conversions — 👉 This is NOT a \$1,000 job. 👉 This is a \$3,000–\$8,000+ solution.

California Reality Check: Small projects: \$3,000–\$5,000 | Medium: \$5,000–\$12,000 | Advanced: \$12,000–\$25,000+

3.2 Retainer Model (Stability + Upsell)

When to use: Ongoing support, continuous improvements, long-term relationship.

Structure: Monthly access to development support, adjustments, system updates, and optimization.

Pricing: Entry: \$1,000/month | Mid: \$2,000–\$3,000/month | Advanced: \$4,000–\$5,000/month

Strategic Advantage: Creates predictable income, less pressure to constantly sell, stronger client retention.

3.3 Recurring Service Pricing (Automation / CRM)

Already defined in Part 2, but reinforced here: **\$297 | \$497 | \$997+**

4. The Pricing Formula (Practical)

Before giving any price, Ben must evaluate:

01	02	03
What problem is being solved?	How much is this worth to the client?	How critical is this system?
04	05	
How complex is the implementation?	What is the long-term impact?	

- ☐ **Simple internal rule:** If the system can generate or save the client money, the price must reflect that value.

5. Minimum Pricing Rule

Binary 1702 LLC must define a **floor**: Minimum project: **\$3,000** | Minimum monthly: **\$297**

Without a minimum: low-quality clients increase, stress increases, time gets consumed, growth slows down.

6. Payment Structure (NON-NEGOTIABLE)

Projects

50% upfront → 50% before delivery

Larger Projects

50% upfront → 25% mid → 25% final

Retainers

Paid monthly in advance

- ☐ **Rule:** No payment → no work starts

7. How to Present Price (THIS CHANGES EVERYTHING)

✗ Wrong Way:

"This will cost around \$3,000... we can adjust if needed..."

✓ Correct Way:

"Based on the scope and the system we discussed, the investment for this project is \$5,000. This includes full implementation, automation setup, and delivery."

Key principle: Say the price as a **statement**, not a question.

8. Handling Price Objections

If client says: "That's expensive"

Correct response: *"I understand. This solution is designed to solve [problem], improve [result], and support your growth. If needed, we can adjust the scope — but not reduce the value of the work."*

Never do: Immediate discounts | Apologizing for price | Dropping price to close

9. Scope Protection Strategy

Golden Rule: If it's not written, it is not included.

Every proposal must define: What IS included | What is NOT included

If client asks for more — Response: *"That falls outside the current scope. I can prepare an additional quote for that."*

10. Anti-Freelancer Rule

Binary 1702 LLC must NEVER: charge random prices, start without agreement, adjust price emotionally, or work "just to help" without structure.

11. Profit Protection Strategy

Every project must include margin for: revisions, unexpected issues, and time buffer.

- ☐ **Internal rule:** If the price feels "comfortable", it is probably too low.

12. Pricing Confidence Shift

Old Identity:

"I hope they accept this price"

New Identity:

"**This is the investment required to implement this solution properly.**"

13. Strategic Pricing Ladder

1

Entry Clients

\$297–\$497/month

2

Growth Clients

\$1,000–\$3,000/month | \$5K–\$10K projects

3

Advanced Clients

\$10K–\$25K+ projects | \$3K–\$5K retainers

14. The Real Goal of Pricing

Pricing is not just about money. It defines: client quality, business stability, stress level, growth speed, and market positioning.

15. Final Pricing Principle: Binary 1702 LLC does not compete on price. It competes on structure, clarity, and results.

"If you price like a freelancer, you stay a freelancer. If you price like a company, you build a company."

Sales Process, Proposal System & Service Packages

PART 2 (CONTINUED) & PART 4 — SALES PROCESS & PROPOSAL SYSTEM

Advanced Plan (Service Package)

Advanced Plan

- Full system implementation
- Multi-channel automation
- Funnel + tracking + integrations
- AI automation workflows
- Website or multi-page system
- Ongoing consulting and optimization

💰 Setup: **\$2,000+** | Monthly: **\$997+**

1. The Core Sales Problem

Right now, the risk is: conversations are unstructured, pricing is reactive, scope is unclear, and deals depend on improvisation.

- ☐ **Required Shift:** Sales must become a **defined process**, not a conversation that "just happens".

2. Sales Process Overview — Binary 1702 LLC's 5-Step Sales System

This structured 5-step system ensures every deal is handled with clarity, professionalism, and defined outcomes — eliminating improvisation from the sales process.

3. STEP 1 — LEAD CAPTURE

Leads may come from: networking, referrals, website, funnels, and outreach.

Required Action: Every lead must go into a system (GoHighLevel, Notion or other CRM). No exceptions.

Minimum Data Collected: Name, Business, Phone, Email, Type of request.

- ☐ **Rule:** If the lead is not in the system, it does not exist.

4. STEP 2 — QUALIFICATION

Before booking a call, the lead must be filtered.

Key Questions:

- What does the business do?
- What problem are they trying to solve?
- Do they already use any systems?
- What is their urgency?
- Are they ready to invest?

Goal: Avoid low-budget clients, unclear projects, and time-wasters.

- ☐ **Rule:** Not every lead deserves a call.

5. STEP 3 — DISCOVERY CALL (STRUCTURED)

This is the most important step. The goal is NOT to sell immediately. The goal is to **diagnose and position the solution**.

01	02	03
Opening (Control the call): "Let me understand your current situation so I can recommend the best solution."	Diagnose: How are you currently handling leads? Where are you losing opportunities? What systems are you using today? What is not working? What would an ideal solution look like?	Identify Pain: Clearly understand lost revenue, inefficiencies, manual work, and missed follow-ups.
04	05	
Quantify Impact: "How many leads do you lose per week?" — This turns the conversation into value.	Position the Solution: "Based on what you shared, there are a few areas we can improve..." — Do not give full solution or price during discovery.	

6. STEP 4 — SOLUTION PRESENTATION

This can be the same call (if simple) or a second call (recommended for higher ticket).

1 Problem Summary

"You mentioned that you are losing leads because there is no follow-up system..."

2 Solution

"What we would implement is a system that captures leads, automates follow-up, and organizes your pipeline..."

3 Deliverables

Explain clearly: CRM, Automations, Website / funnel, AI workflows, Software (if applicable)

4 Outcome

"This will allow you to respond faster, capture more opportunities, and operate more efficiently."

- ☐ **Rule:** Sell the outcome, not the features.

7. STEP 5 — PROPOSAL & CLOSING

7.1 Proposal Structure

Every proposal must include:

1. Client problem
2. Proposed solution
3. Scope of work
4. Deliverables
5. Timeline
6. Investment
7. Payment terms
8. Responsibilities
9. Next steps

7.2 Proposal Delivery

Never send without context. Correct approach: *"I've prepared a structured proposal based on our conversation. Let me walk you through it."*

7.3 Closing the Deal

After presenting, ask: *"Does this align with what you're looking for?"*

Then: *"If everything looks good, the next step is to move forward with the agreement and initial payment so we can begin."*

8. Handling Objections

"I need to think about it"

"Of course. Is there anything specific you'd like me to clarify or adjust before you make a decision?"

"It's too expensive"

"I understand. This solution is designed to solve [problem] and improve [result]. If needed, we can adjust the scope but not reduce the quality of the solution."

"Can you lower the price?"

"We can adjust the scope if needed, but the pricing reflects the value and structure required to implement this properly."

9. Follow-Up System (CRITICAL)

Most deals are lost here.

Example: *"Just checking in — did you have a chance to review the proposal?"*

- ☐ **Rule:** Follow-up is part of the sales process, not optional.

10. Sales Discipline Rules

Binary 1702 LLC must operate with: no random pricing, no verbal agreements, no starting without payment, no undefined scope, no emotional decisions.

11. Positioning Rule (VERY IMPORTANT)

Ben must stop acting like: **a developer waiting for instructions**

And start acting like: **a consultant leading the solution**

12. Sales Identity Shift

Old:

"I hope they choose me"

New:

"I guide businesses through the best solution for their situation."

13. Conversion Strategy

Key Drivers:

- Clarity
- Confidence
- Structure
- Professionalism

Not:

- Discounts
- Over-explaining
- Trying to impress

14. Strategic Principle

The client does not buy when they understand everything. The client buys when they **trust the structure and the outcome**.

- 15. Final Sales Rule:** A structured process closes more deals than talent alone.

Contracts, Legal Structure, Protection & Operations

PART 5. CONTRACTS, LEGAL STRUCTURE & PROTECTION

1. The Core Legal Problem

Without proper legal structure, Binary 1702 LLC is exposed to: undefined scope and unlimited requests, clients requesting additional work without compensation, confusion over ownership of software and systems, payment delays or non-payment, misuse of systems or deliverables, and future disputes and misunderstandings.

☐ **Required Shift:** Binary 1702 LLC must operate with **mandatory documentation and defined agreements before any work begins.**

2. Mandatory Documents (Non-Negotiable)

01	02
NDA (Non-Disclosure Agreement)	Service Agreement (Main Contract)
03	04
Scope of Work (SOW)	Payment Terms
05	06
Ownership & Licensing Clause	Change Order Policy

3. NDA (Non-Disclosure Agreement)

Purpose — The NDA protects: business ideas, system logic, workflows and automations, client data, and proprietary information.

When to Use: Before discussing sensitive projects, before sharing system architecture, before reviewing internal processes.

☐ **Rule:** No sensitive information should be shared without a signed NDA when applicable.

4. Service Agreement (Main Contract)

This is the foundation of the client relationship.

Must Include: Parties involved, description of services, reference to scope of work, timeline, payment structure, responsibilities of each party, limitations of service, and termination conditions.

☐ **Core Rule:** If it is not written in the agreement, it is not part of the project.

5. Scope of Work (SOW)

This is the most critical document to prevent conflict.

Must Clearly Define:

- What is included
- What is not included
- Deliverables
- Timeline
- Dependencies
- Client responsibilities

Example:

Included: CRM setup, 1 pipeline, automation workflows

Not included: additional pages, advanced integrations, ongoing modifications

☐ **Rule:** A clear scope protects time, pricing, and expectations.

6. Payment Terms

Projects 50% upfront → 50% before final delivery	Larger Projects 50% upfront → 25% mid-project → 25% upon completion	Recurring Services Monthly payment in advance
--	---	---

Rules: No payment → no work begins | No final payment → no final delivery

7. Ownership & Licensing Clause (CRITICAL)

Option A — Client Ownership

The client owns the final product. Binary 1702 LLC retains the right to reuse frameworks, code structures, and non-exclusive components.

Option B — Licensing Model

The client pays for usage rights. Binary 1702 LLC retains ownership of the system.

Recommendation: Default to client owns the final product; Binary retains reusable intellectual property.

☐ **Rule:** Ownership must always be defined before development begins.

8. Client Responsibility Clause

The client is responsible for:

- Software subscriptions (GoHighLevel, etc.)
- API usage (OpenAI, Twilio, Stripe, etc.)
- Hosting (AWS, Vercel, etc.)
- Domains and third-party tools

Binary 1702 LLC is responsible for:

- Development
- Implementation
- System setup

☐ **Rule:** Binary 1702 LLC does not absorb third-party operational costs.

9. Change Order Policy

This protects against scope creep. Any request outside the defined scope must be: 1. Documented → 2. Quoted → 3. Approved → 4. Paid (if applicable) — before execution.

Example Response: *"That request falls outside the current scope. I can prepare an additional quote for that."*

10–13. Additional Legal Clauses

Timeline & Delays Define project timeline, dependencies on client, and approval requirements. Delays caused by the client may extend the delivery timeline.	Termination Clause Define conditions for termination, payment obligations, and work already completed. Work completed must still be paid, even if the project is terminated early.	Liability Limitation Binary 1702 LLC is not responsible for business outcomes, revenue results, client misuse of systems, or third-party failures. The company provides systems and implementation, not guaranteed financial results.	Communication & Approval Define how approvals are given, who is the main contact, and response expectations. No major change or step is executed without approval.
---	--	---	--

14. Legal Discipline Rule

Binary 1702 LLC must never: start projects without a signed agreement, work without defined scope, accept verbal-only agreements, or deliver final product without final payment.

15. Strategic Protection Principle: Contracts are not a formality. They are a business protection system.

16. Final Legal Positioning: Binary 1702 LLC operates as a structured company that defines expectations, documents agreements, protects its work, and maintains professional boundaries.

"If you don't define the rules, the client will define them for you."

PART 6. OPERATIONS, WORKFLOW & DELIVERY SYSTEM

1. The Core Operational Problem

Without structure, the business becomes: reactive, disorganized, dependent on memory, overwhelming, and inconsistent in delivery.

☐ **Required Shift:** Binary 1702 LLC must operate through **defined workflows, systems, and repeatable processes.**

2. Operational Structure Overview — Clear Workflow Pipeline

This end-to-end workflow ensures every client engagement is handled consistently, professionally, and with full accountability at each stage.

3. Core Systems Required

 GoHighLevel CRM, leads, automation	 Notion (or similar) Project management & SOPs	 Slack (or similar) Communication
 Stripe (or similar) Payments	 Google Drive / Cloud File organization	

4. Client Onboarding Process (CRITICAL)

This is where most companies fail.

1 Step 1 — Contract & Payment Signed agreement + initial payment completed before anything	2 Step 2 — Onboarding Form Business information, access credentials, existing tools, goals and expectations
3 Step 3 — Kickoff "We are starting your project. Here's what to expect and next steps."	4 Step 4 — System Setup Create project in Notion, assign tasks, define timeline

☐ **Rule:** No onboarding → no work starts

5. Project Execution Workflow

01 Phase 1 — Planning: Review scope, confirm deliverables, identify dependencies	02 Phase 2 — Build: CRM setup, website / funnel, automations, software (if applicable)	03 Phase 3 — Testing: Validate system, check automations, confirm functionality
04 Phase 4 — Client Review: Present system, gather feedback, adjust if within scope	05 Phase 5 — Delivery: Final approval, final payment, handover	

6. Delivery Standard

Binary 1702 LLC must deliver: functional systems, clean structure, clear user experience, and basic documentation (if needed).

☐ **Rule:** Delivery must reflect a company, not a rushed freelancer job.

7. Communication Structure

Define: primary contact person, communication channel (email, Slack, etc.), and response time expectations.

Recommended: 24–48 hour response time | No constant interruptions | No informal, uncontrolled messaging

☐ **Rule:** Communication must be structured, not chaotic.

8. Task & Project Management

Every project must have: task list, deadlines, and status tracking.

Pending	In Progress	Waiting on Client	Completed
----------------	--------------------	--------------------------	------------------

☐ **Rule:** If it is not tracked, it will be forgotten.

9. Time & Work Management

Ben must stop: jumping between tasks randomly and reacting to every message immediately.

Recommended structure — Block time for: Development | Client communication | Sales | Planning

☐ **Rule:** Controlled time = controlled business

10–14. Quality, Dependency & Post-Delivery

Quality Control Before delivery: functionality check, automation testing, UI review, error verification. Never deliver without testing.	Client Dependency Management Define what depends on the client, deadlines for client responses, and impact of delays. Client delays = timeline adjustments.	Post-Delivery Strategy Every client evaluated for: monthly support, system optimization, additional features, new projects. Goal: turn every project into recurring revenue and long-term relationship.	Upsell & Expansion After project completion, ask: "Would you like ongoing support or optimization for this system?"
---	---	---	---

14. Operational Discipline Rules

Binary 1702 LLC must never: start without onboarding, work without tracking, deliver without testing, accept uncontrolled communication, or skip documentation.

15. Scalability Principle

The goal is not to work more. The goal is to build a system that: repeats, scales, reduces chaos, and allows delegation in the future.

16. Founder Operational Role

Ben must operate as:

- Project controller
- System builder
- Decision maker

Not:

- Task responder
- Constant firefighter

17. Final Operational Principle: A structured operation creates speed, quality, and scalability.

"Right now you're working inside the business. We're going to build a system so the business works for you."
